The Gallinas Levee Upgrade Project is vital to the Santa Venetia community. Upgrading and raising the timber-reinforced berm (TRB) perimeter levee system will help keep the community safe from tidal flooding.

Easement Acquisition

**April 2021 – Until Complete**

Marin County’s Real Estate Division is meeting with 100+ property owners who reside along the creek side of Vendola Drive to conduct appraisals and purchase the easements required for the project.

Design

**March 2020 – Until Complete**

The location of the improved levee structure will roughly follow the same footprint as the existing TRB along the creek side of Vendola Drive. The new structure will be more deeply anchored, thereby improving its ability to hold back high tides expected with sea level rise through 2050.

Construction

**Summer 2022 – Until Complete**

Construction of the entire berm upgrade is expected to begin during the summer of 2022.
